

**UMich/NASA
Symposium
on**

ADVANCES IN TURBULENCE MODELING

**UNIVERSITY OF MICHIGAN
ANN ARBOR, MI
JULY 11,12,13, 2017**

Timeline:

Feb 28, 2017: 1 Page abstract due
Mar 30, 2017: Acceptance notification
May 15, 2017: Final agenda posted
Apr 15- Jun 15, 2017: Open registration

turbgate.engin.umich.edu/symposium

Organizing committee:

**Karthik Duraisamy (University of Michigan)
Philippe Spalart (Boeing)
Chris Rumsey (NASA Langley)**

Objectives:

1. Discuss the state-of-the-art in turbulence modeling from an academic and an industrial perspective
2. Place some of the newer developments in RANS modeling (such as uncertainty quantification, data-driven modeling, etc.) in the context of main-stream turbulence modeling.
3. Explore synergies between turbulence theory, 'traditional' turbulence modeling routes and 'emergent' ideas
4. Discuss expectations (and 'glass-ceiling') of turbulence models in analysis, design and decision-making
5. Discuss the extent to which RANS should be employed in a Wall-modeled LES setting
6. Provide input for a position paper on the status of turbulence modeling and a vision for the future

Format:

Invited talks : 30 min each

Contributed talks : 15 min each

White board discussions : 1 hour each

1 session on progress towards the NASA RCA validation workshop

Talks (no paper) are solicited in areas related to the objectives of the symposium. For example: Near-wall turbulence modeling; DNS/LES/Experiments focused towards improving/developing turbulence models; data-driven turbulence modeling; uncertainty quantification as related to turbulence modeling; Non-equilibrium turbulence modeling; PDF methods; turbulence theory; advanced second moment closures; novel use of turbulence models; thoughts/predictions regarding the future of turbulent flow prediction; industry perspectives, benchmarking, V&V, etc.
